

Workplan

Milestones (shown by vertical dashed lines): M1 – Construction of experimental setup; M2 – Implementation of two scour models; M3 – Results collected from flume experiments; M4 – Selection of scour modelling approach; M5 – Compare derived relationships between debris characteristics and hydrodynamic parameters to current guidance that excludes debris effects; M6 – Implementation into guidance and completion of all tasks

Observation: The vertical double-arrows show only the connectivity between various working packages, their position is not time related.
